

Key Advantages:

- Waterproofing and corrosion protection
 - Environmentally safe
- Permanently flexible and seamless coatings
 - Resists cracking and ageing
 - Water based
- Unaffected by a range of acids, alkali's and waterborne salts
- Protects against ultra violet rays, salt & thermal cycling
 - Easy to apply

Adheres to:

- Concrete
 - Stone
 - Wood
 - PVC
 - Zinc
- Bitumen
 - Metal
- Corrugated Iron

Liquid Rubber
New Zealand

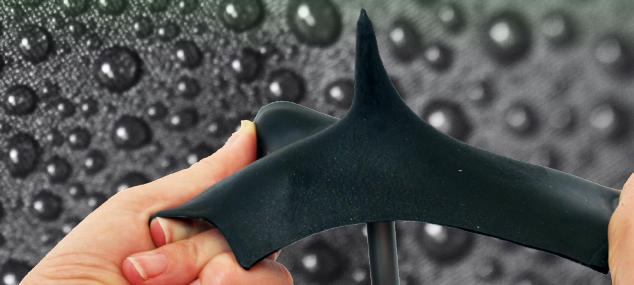

Simple Waterproofing Solutions

- Long Lasting
- Do-It-Yourself Waterproofing
- Fast Drying & No Solvents
- Flexible & Resists Cracking
- Small Repairs or Larger Projects

Our **Liquid Rubber Waterproofing** products serve two primary purposes:

1. Stop water infiltration through substrates
2. Prevent water reactions (rust) with material such as metals.

Liquid Rubber Coatings were developed to keep moisture and water out, saving you time and money from the damage moisture can cause. Our innovative and highly flexible products will put your mind at ease knowing your home, materials and structures are protected.

All of our Liquid Rubber products are:

- Non-toxic
- Safe for the environment and the person applying it
- Solvent free & contains no VOCs
- Water-based

Liquid Rubber Waterproof Sealant is quite literally a liquid rubber that can be applied like any normal paint to most common surfaces to waterproof and protect surfaces. It dries to form a tough, durable, environmentally safe, permanently flexible, fully adhered and seamless membrane, which provides reliable waterproofing. It is unaffected by acids, alkali's and waterborne salts, and protects against damage from UV, salt, thermal cycling, harmful chemicals and is resistant to biological deterioration.

Liquid Rubber Smooth Coating is a highly flexible waterproofing membrane with a semi-gloss finish that is designed to reflect heat, solar and UV rays, reduce thermal heat transmission as well as aid the waterproofing properties of our Waterproofing Sealant. It is designed for long term outdoor exposure and remains flexible under extreme elongation and constant exposure to moisture. It also adds a tougher coating that will withstand moderate foot traffic.

Liquid Rubber Deck Coating is a high performance coating that is designed to provide an aesthetically pleasing and cost effective, trafficable surface for low traffic walking surfaces such as decks, patios, steps, walkways, pool areas, garages and factory floors as well as providing some waterproofing properties. Used over the top of the waterproof sealant, Liquid Rubber Deck Coating comes in a standard light grey but can be tinted on request.

Ideal For Use On:

- Roofing:
 - Flat, Torchdown coatings
 - Asbestos encapsulation
 - Metal Roofing
 - Seams
 - Joints
 - Cracks
 - Connections
 - Penetrations
- Construction parts
 - Walls
 - Gutters
 - Ponds
 - Decks
 - Balconies
 - Patios
 - Steps
 - Walkways
 - Pool Areas
 - Garages
 - Factory Floors
 - Pipelines
 - Tanks
- Structures & buildings
