

# C200

PROTECTIVE ROOF COATING

SEMI-GLOSS WATERBORNE EXTERIOR

C200 is a **water based** tough, hard wearing elastomeric **roof coating** that adheres to existing painted surfaces, concrete, timber, waterproofing membranes and sealants with minimal preparation. Supplied at application viscosity, it gives an **extremely tough** and hard film. Because it uses a high performance polymer it is resistant to yellowing and age crazing.

PROUDLY NZ MADE

QUICK DRY TIME

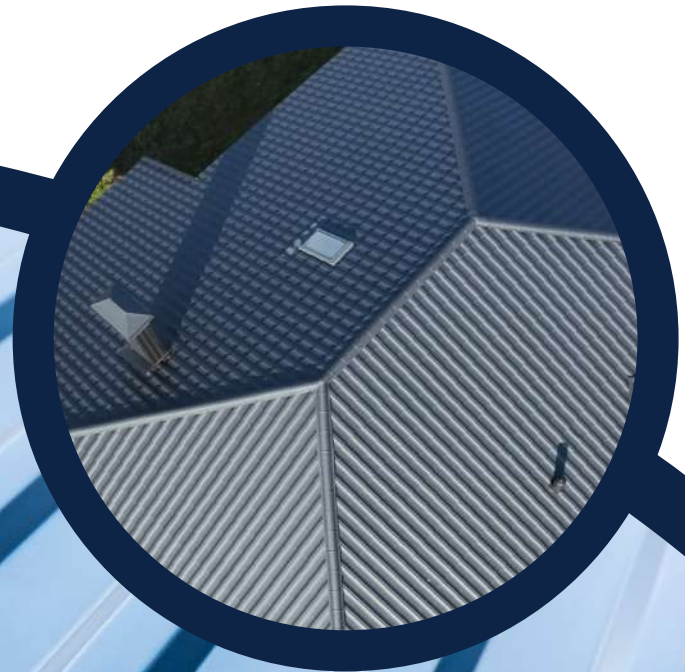

STATE OF THE ART UV ABSORBERS

HIGH PERFORMANCE ANTI CORROSION PIGMENTS

C200 has state of the art uv absorbers incorporated that assist in surface protection from the effects of NZ's harsh UV. It is frequently used as a waterproofing coating for roofs etc. It contains high performance anti corrosion pigments and may be used for collection of potable water. This high solids coating is manufactured with high quality polymers also featuring antimicrobial benefits meaning minimal moss, mould and mildew growth with up to 10 year project specific warranty.

## TYPICAL PROPERTIES

Resin type	High build / performance polyurethane acrylic
Solids content	54.2% solids, 1.38kg/L
Colour	Core range Coloursteel colours, custom colours available
Elongation	250-320%
Coverage	1L/8m2 depending on substrate
