

# SUPER ETCH PRIMER

SOLVENT BASED PRIMER

Super Etch Primer is a solvent based tough, hard wearing sealer/primer to existing painted surfaces, steel, galvanizing, zinc, aluminium and magnesium alloys, aluminium extended bituminous paints and bitumen coated roofing products with minimal preparation.

Supplied at application viscosity, it gives an extremely adherent surface film because it uses a high-performance polymer it is resistant to yellowing and age crazing.

This product is designed to dry very quickly in exterior applications, thus allowing top coats to be applied rapidly on areas such as roofs and decks.

# Application

Apply one thin coat of Super Etch Primer at a typical coverage rate of 8-12 sqm/L, allow to dry sufficiently to allow foot traffic (60 minutes at 20oC and 50% RH). Apply the top coat systems as recommended in the data sheets, ideally in alternate cross hatch patterns.

## Benefits of Super Etch Primer

- Etching primer
- Good adhesion to silicone and aluminium and new galv
- Single pot for easy use
- Minimal odour
